

NPL Site Narrative for B.F. Goodrich

B.F. GOODRICH

Calvert City, Kentucky

Conditions at listing (December 1982): The B.F. Goodrich Site is a 2-acre industrial landfill that operated in Calvert City, Kentucky, from 1969 to 1978. Among wastes accepted were brine sludges containing mercury and palladium, which were disposed of mainly in bulk. The site also contains several old pits where organic materials were burned. Later the pits were covered. Ground water contamination associated with waste disposal operations is suspected.

Status (July 1983): EPA recently completed a Remedial Action Master Plan outlining the investigations needed to determine the full extent of cleanup required at the site. It will guide further actions at the site.

For more information about the hazardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry (ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at [ATSDR - ToxFAQs](http://www.atsdr.cdc.gov/toxfaqs/index.asp) (<http://www.atsdr.cdc.gov/toxfaqs/index.asp>) or by telephone at 1-888-42-ATSDR or 1-888-422-8737.
